

**STARVIEW™**

**SDC SERIES  
AUTOMATIC  
SLITTING-DIE CUTTING  
MACHINES**

**Standard SDC Slitter-Die Cutter shown.**

- ★ **Effective for trimming skin boards where it is desirable to trim packages with product facing up**
- ★ **Available with slitting wheels for cutting or perforating**
- ★ **Cross-cut may be straight or rounded corners and can include common hang hole styles**
- ★ **Small footprint conserves floor space**
- ★ **Two standard machine sizes available**
- ★ **Quick changeover of cross cut from Touch Screen and moveable slitters mounted on rail**
- ★ **Heavy-duty industrial design floor model machine**

## Description

**Starview's SDC Series** combination slitting and die cutting machines are a cost effective way to trim skin packaged products. These machines eliminate the use of individual steel rule dies for each different package configuration. The SDC Series features an intermittent motion in-feed conveyor to transfer skin boards to the die cutting and slitting area. Circular cutters running against a hardened steel roller are used to slit parallel to the movement of the skin board. A pneumatic press activates the cross cutting perpendicular to the movement of the skin board. The interval at which this cut is made is programmable from the touch screen operator interface panel.

**Starview's SDC Series** machines utilize photocells and clear polycarbonate guards for operator safety. To prevent damage to the cross cutting knife, the SDC Series machines also utilize photocells to detect products that may be in the cutting area

**Starview's SDC Series** slitting and die cutting machines can be provided with additional slitting heads for straight or perforated cutting as well as longer than standard in-feed and out-feed conveyors.
